Statement

This manual copyright belongs to Zhengzhou Winsen Electronics Technology Co., LTD. Without the written permission, any part of this manual shall not be copied, translated, stored in database or retrieval system, also can't spread through electronic, copying, record ways.

Thanks for purchasing our product. In order to let customers use it better and reduce the faults caused by misuse, please read the manual carefully and operate it correctly in accordance with the instructions. If users disobey the terms or remove, disassemble, change the components inside of the sensor, we shall not be responsible for the loss.

The specific such as color, appearance, sizes &etc, please in kind prevail.

We are devoting ourselves to products development and technical innovation, so we reserve the right to improve the products without notice. Please confirm it is the valid version before using this manual. At the same time, users' comments on optimized using way are welcome.

Please keep the manual properly, in order to get help if you have questions during the usage in the future.

ME2-CO-Φ 14x5 Carbon Monoxide Gas Sensor

Profile

ME2-CO-Φ 14x5, fuel cell type sensor, detects gas concentration by measuring current based on the electrochemical principle, which utilizes the electrochemical oxidation process of target gas on the working electrode inside the electrolytic cell, the current produced in electrochemical reaction of the target gas are in direct proportion with its concentration while following Faraday law, then concentration of the gas could be detected by measuring value of current.

Features

- * Low consumption
- * High precision
- * High sensitivity
- * Wide linear range
- * Good anti-interference ability
- * Excellent repeatability and stability

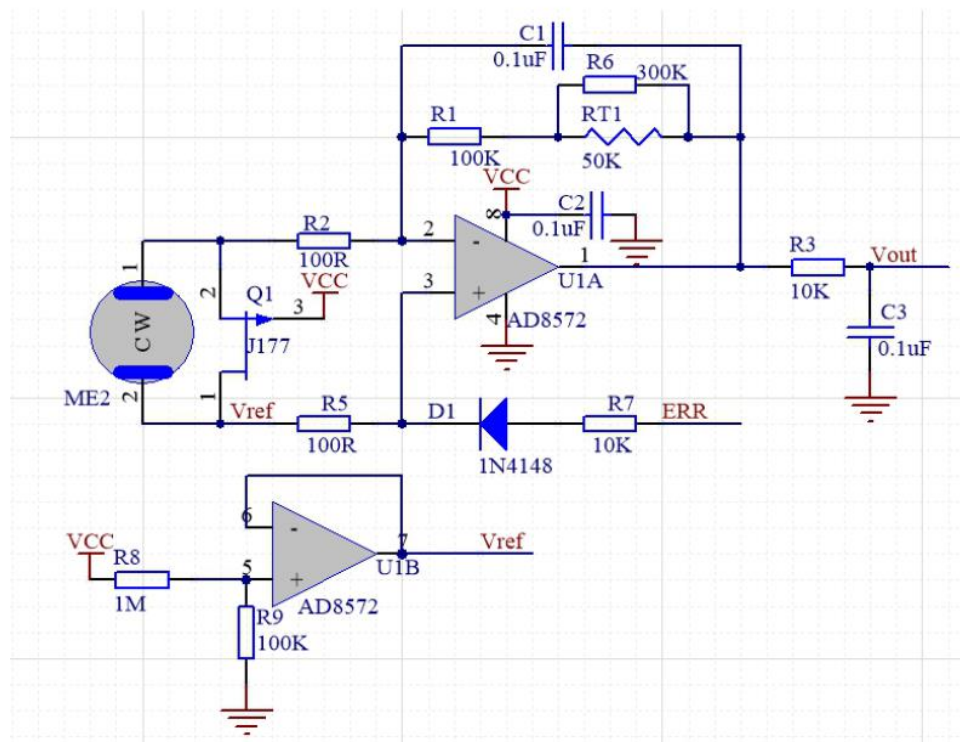

Main Applications

It is widely used in CO concentration detection in commercial, vehicle, small generator field and other fields.

Technical Parameters table1.

Item	Parameter
Detection gas	CO
Measurement Range	0~5000ppm
Max detecting concentration	10000ppm
Sensitivity	(1.2~3.5)nA/ppm
Resolution ratio	1ppm
Response time(T90)	<30S
Load resistance(recommended)	(500/1K/2K) Ω
Repeatability	<3% output value
Output Linearity	linear
Zero drift(-20°C~40°C)	≤10ppm
Temperature Range	-10°C~50°C (common) -20°C~60°C (occasionally)
Humidity Range	15%~90%RH
Pressure range	Normal atmosphere±10%
Anticipated using life	10 years

Cross-sensitivity

ME2-CO-Φ14x5 sensor also responds to other gases besides CO. Below are the response characteristics of interferential gases for reference.

Gas	Concentration	ME2-CO-Φ14x5
H ₂ S	100ppm	0ppm
C ₂ H ₄	100ppm	80ppm
NO	35ppm	6ppm
NO ₂	5ppm	0ppm
SO ₂	20ppm	0.6ppm
NH ₃	50ppm	1ppm
CH ₃ CL	5ppm	0ppm
ETO	10ppm	0ppm
C ₆ H ₆	100ppm	1.5ppm
C ₃ H ₆ O	100ppm	3.5ppm
CH ₃ OH	200ppm	0ppm

Application Notes:

- The lead can be welded during installation, and the solder can NOT contact the sensor;
- Before using, power on to aging for more than 48 hours is necessary.
- Don't disassemble the sensor to avoid the damage caused by electrolyte leakage.
- Avoid contacting organic solvent (including Silicone rubber and other adhesive), coatings, medicine, oil and high concentration gases.
- All the electrochemical sensors shall not be encapsulated completely by resin materials, and shall not immerse in non-oxygen environment, otherwise, it will damage the function of sensor
- All electrochemical sensors shall not be applied in corrosive gas environment, or the sensor will be damaged
- Zero calibration should be finished in clean air.
- During test and usage, sensors should avoid the gas inflow vertically
- The side for inflow can't be choked and polluted.
- The laminating film above the sensor surface can't be uncovered and damage.
- Excessive impact or vibration should be avoided
- It takes some time for the sensor to return to normal state after it is applied in high concentration gas
- Working electrode and reference electrode of the sensor shall be in short circuit when stored
- Prohibit to use the hot cement or sealant of which the curing temperature is higher than 80°C to make the capsulation for the sensor.
- Prohibit storage and usage for long time in alkaline gases with high concentration.
- Do not use the sensor when the shell is damaged

Note: To keep continual product development, we reserve right to change design features without prior notice !
